

Google Sketch Up Instructions

Overview:

What is the all purpose of this program?

What are three things you have learned from this demonstration?

- o
- o
- o

Use the website (<http://sketchup.google.com/training/videos.html>) to identify the purpose of each tool.

Tasks to complete:

You will complete the following with your group when you are using the desk tops with Google Sketch up!

1. Draw a square or circle and make it 3 dimensional: Describe what tools you used to do this and what you learned.

2. Draw a roof on your square: Describe what tools you used to do this and what you learned.

3. Paint your structure: Describe what tools you used to do this and what you learned.

4. Measure one side of your structure: Describe the tools you used and why this will be helpful in a project.

5. Enlarge your building: Describe the tools you used.

6. Put your building in a location of your choice using Google Earth: How did you do this? What did you learn?

7. Add a building to what you have already done: How did you do that? What did you bring in?

8. Try one thing that is not listed to change your structure. What did you do? How did it change it?

Gallery Walk:

- What are three things that are different between other people's structures than your own?

- What are three things that are similar between other people's structures and your own?

- Describe the most creative thing you saw in other people's structures.
